3 Specifications 6

4 Panel Guide 7

5 LED Display 9

6 WEB Management Interface (Web GUI) 12

1 Features

AT5000 1RU Optical A/B Switch offers a high reliable, flexible, optical fiber route switching platform with low insertion loss and high performance. It is suited for redundant CATV high quality video transmission system, fiber redundant ring, FTTX Video Overlay with 1550nm Optical transmitter and EDFA, to protect the optic path, and fiber ring architecture.

The OPSAB maintains optical output in the event of failure of an optical input. The unit includes an electrically-operated optical switch. The switch can be activated both manually and automatically. Together with ACT 1RU AT5000 XMOD and EDFA optical amplifiers, the 1RU OPSW A/B Switch provides an ideal fiber protection mechanism for long distance video and short, medium video overlay solution in traditional HFC network and also high density FTTX networks to achieve the strict reliability requirement.

AT5000 OPSW receiver is equipped with intuitive front panel LCD display to make operator's life easier. The optical receiver is packaged in a self-contained 19" sub-rack of 1 RU with universal mains power supply and SNMP management.

1. Has both auto and manual function

In auto mode, the default main input is input A with input B for backup. Once there is a failure or the optical power is lower than the set value, it will switch to the backup line. Once conditions are back to normal and the main line is functional again, it will switch to the main line automatically. When the machine is in manual, it can switch to either the main or backup line. The default condition is auto mode.

2. Independent optical RF detector for both inputs

TP A for input A, TP B for input B. When optical input power ≥ 0 dBm, the RF detector function becomes available. The RF detector will turn on in "Auto" mode; when the detected RF value is lower than the minimum values required, it means there is no RF signal on this input port, and then the detector will switch automatically to another signal input. If it detects an RF signal, the equipments will switch automatically to the normal signal input. If no RF signal is detected on either input, the optical switch will stop working. When the optical input power ≤ 3 dBm, the RF detect function will turn off to avoid errors. The factory default RF detector function is the "Auto" working mode.

3. Power cut protection function

When the optical switch fails or power cut, it will continue to work in the working line to make sure the network not cut.

4. Dual hot plug-in power supply

If one power supply fails, the operator can change the power supply in working condition, no need to open the machine.

5. Switch power threshold can be changed

The operator can set the switch power threshold by button or by SNMP

6. Works in the -15 dBm to +24 dBm range

7. SNMP support both software and IE

2 Before Installation

1. Please examine this machine, shelf and the power to see if the power supply is good. Keep space at least 4.5 cm in the shelf.
2. Keep the machine good grounded.
3. Please make sure the connector is clean before installation. Please clean the fiber connector with pure alcohol before insert the fiber.
4. After connecting the power, please turn on the power in the back.

3 Specifications

Item	Description
Wavelength	1200 nm to 1600 nm
IL	≤ 1.0 dBm
Echo Loss	≥ 55 dB
PDL	≤ 0.06 dB
Switch Limit	10000000
Switch Range	-15 dBm to +24 dBm
Switch Time	≤ 10 ms
RF Test Output Level	66 dBm (+3 dBm input)
Power Supply	220 V _{AC} / -48 V _{DC}
Switch	Auto or manual
Network Port	Internet (SNMP), console
Fiber Connector	FC/APC or SC/APC
Relative Humidity	0 % to 95 % (non-condensing)
Operating Temperature	-20 °C to +55 °C
Power Consumption	≤ 2 W
Dimensions (L × W × H)	483 mm × 270 mm × 44 mm
Weight	3.5 kg

4 Panel Guide

Front panel guide:

TP A and TP B

TP A: RF test port of channel A

TP B: RF test port of channel B

OPT IN A

Green: Input A working

Red: Input A warning

OPT IN B

Green: Input B working

Red: Input B warning

OUTPUT

Green: Working

Red: Warning

POWER

Green: Both power supplies are working

Red: Single power supply is working

LED Display

Displays parameters

IN A and IN B

IN A: Channel A input

IN B: Channel B input

OUT

Optical output

Rear Panel Guide:

PS1 (AC or DC)

Power Supply 1: -48 V_{DC} or 220 V_{AC}, 2 A for fuse

Console

Port standard local management port

ETHERNET

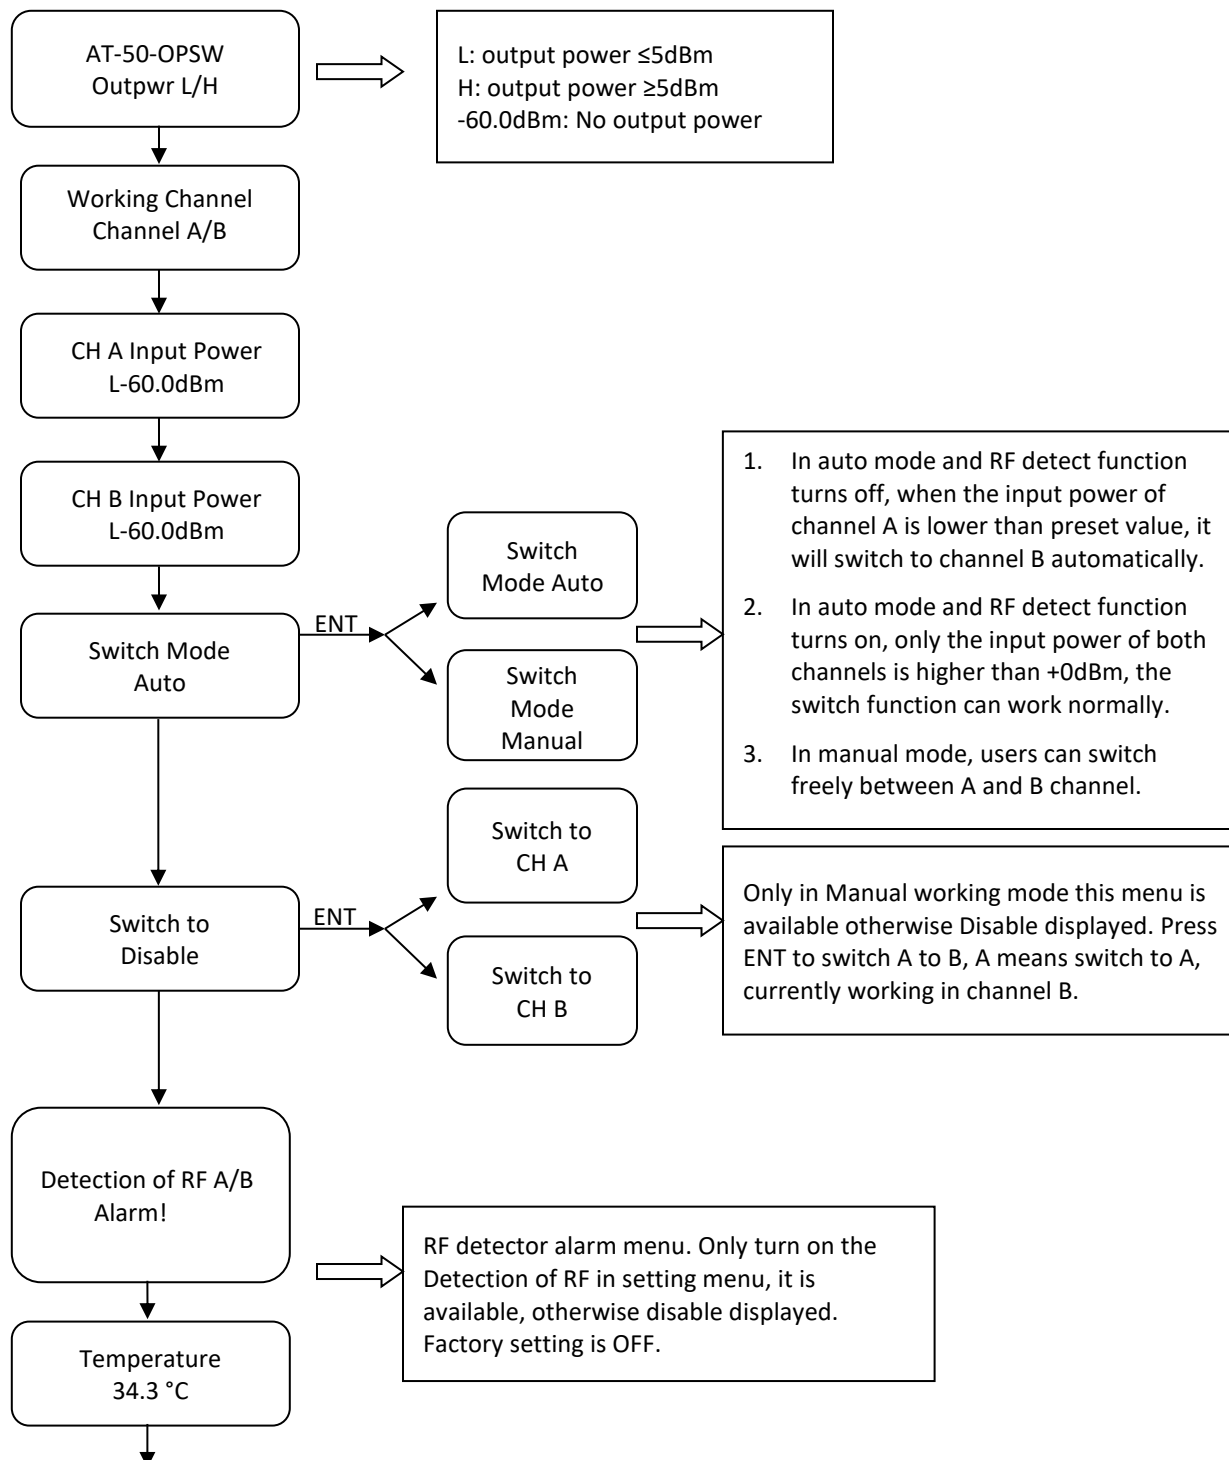

Port standard SNMP management port

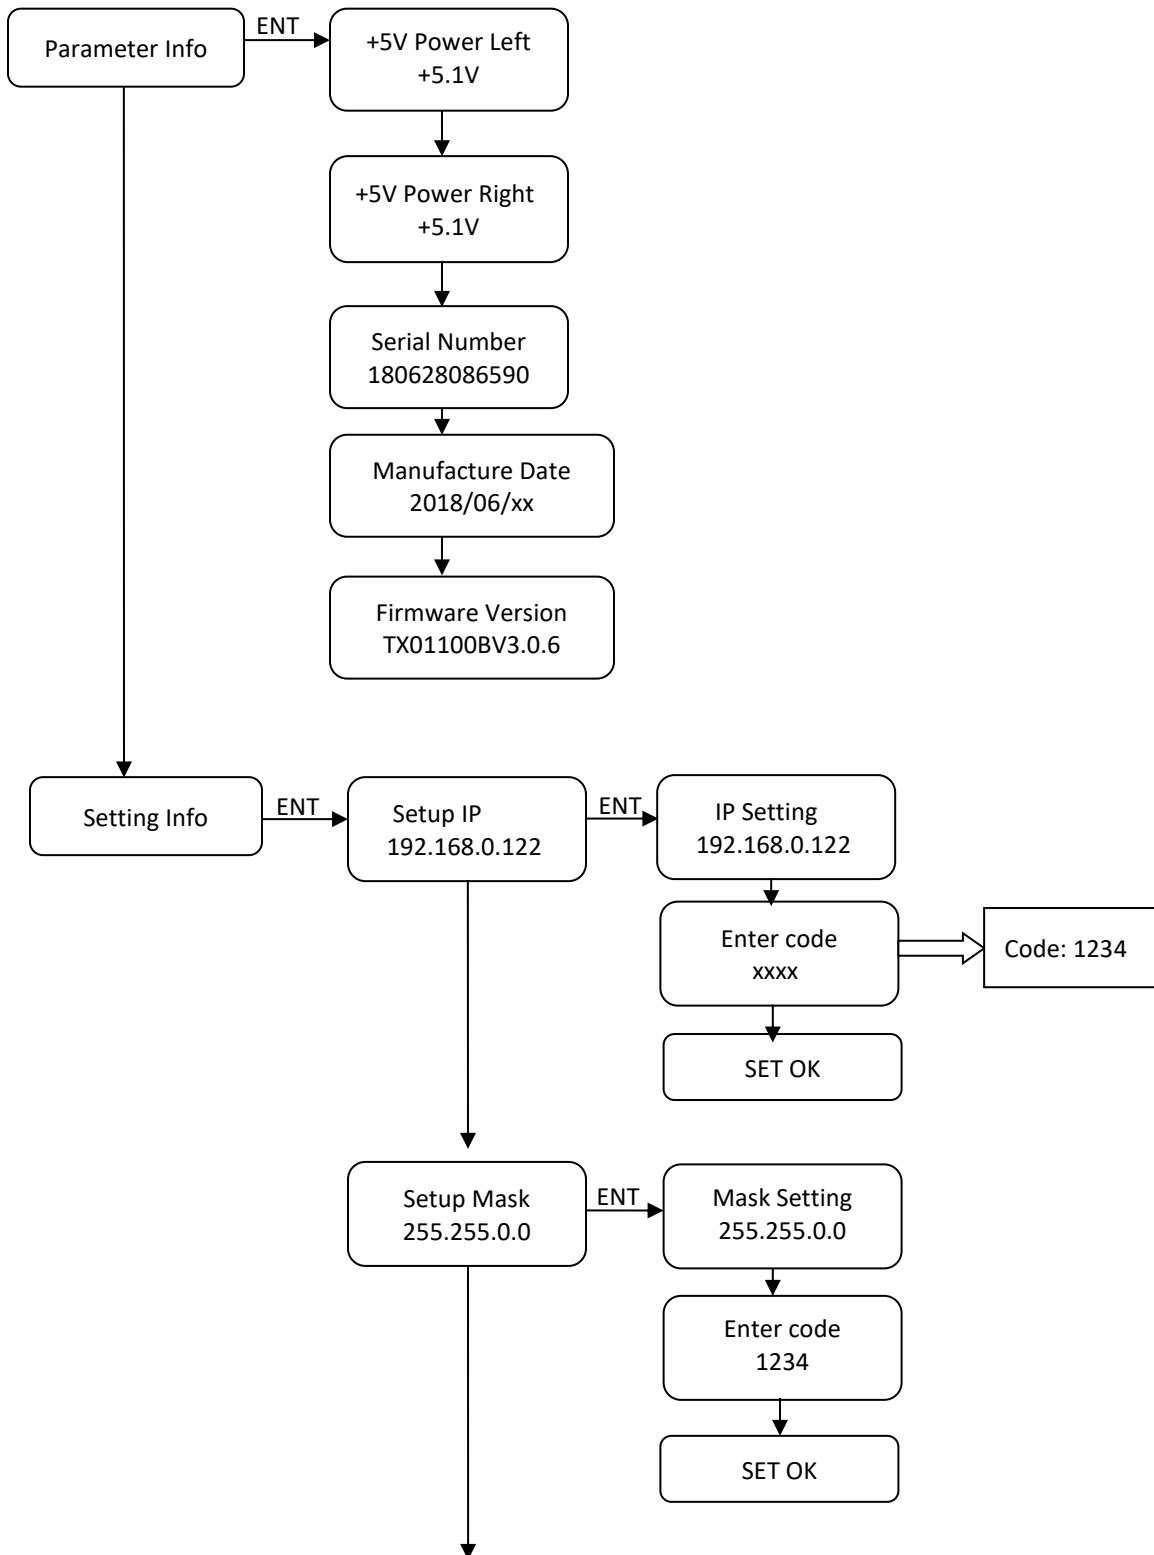

PS2 (AC or DC)

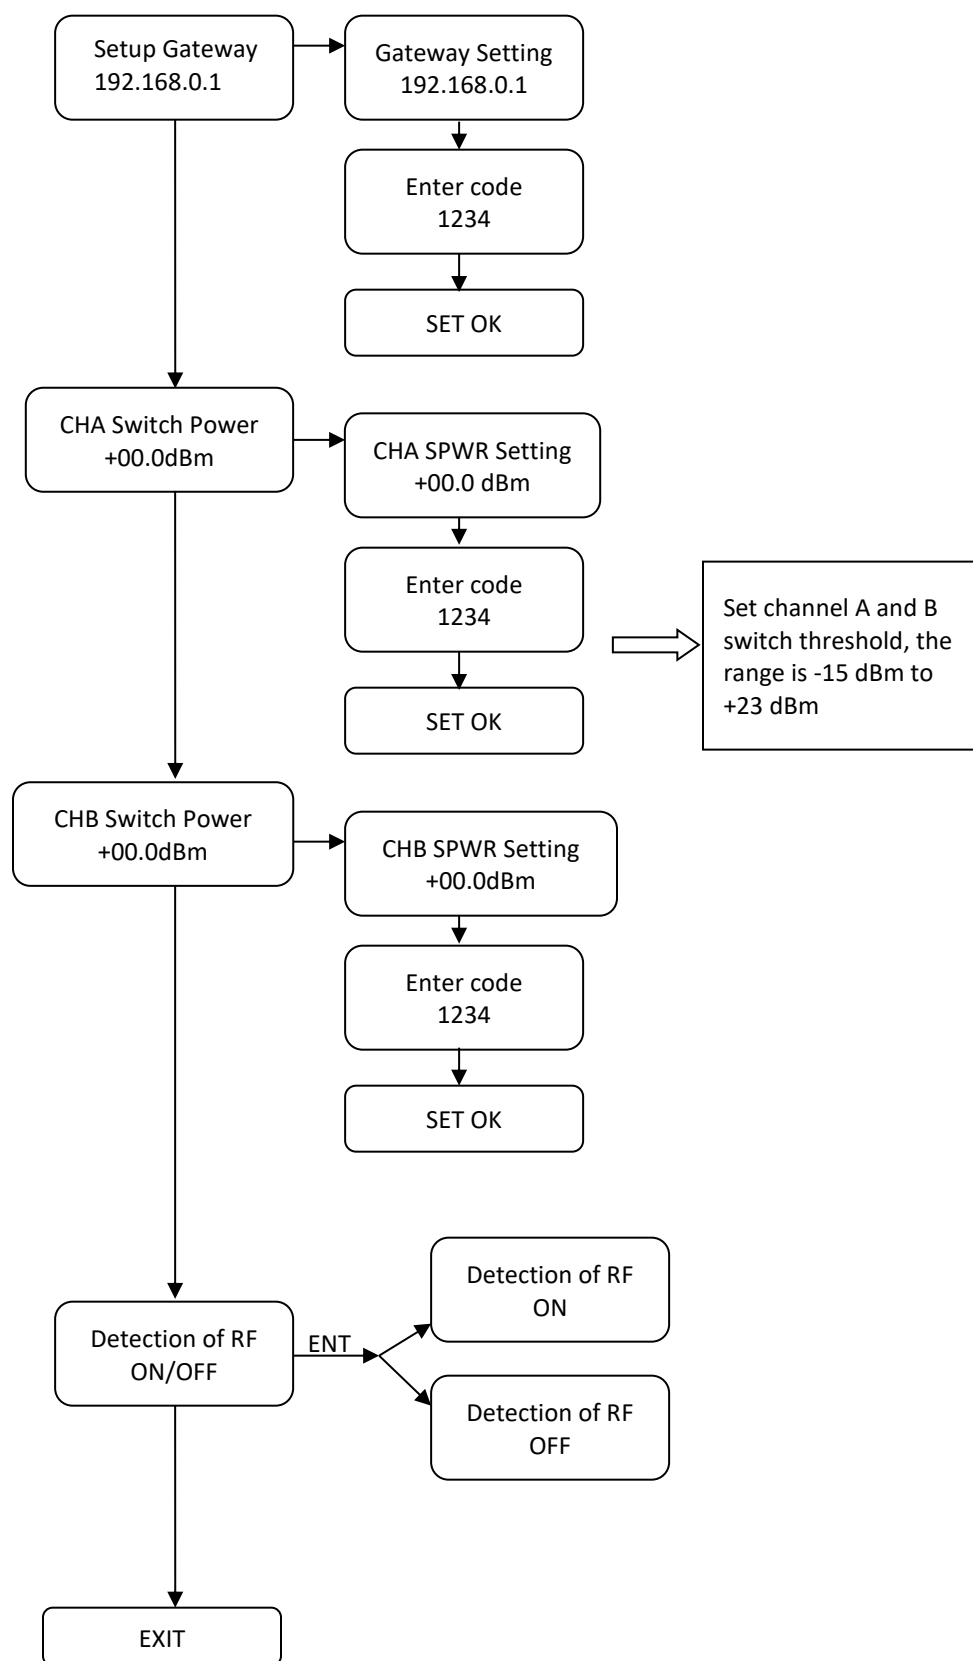

Power Supply 2: -48 V_{DC} or 220 V_{AC}, 2 A for fuse

5 LED Display

Press ↑ ↓ and ENT button, you can see the following information

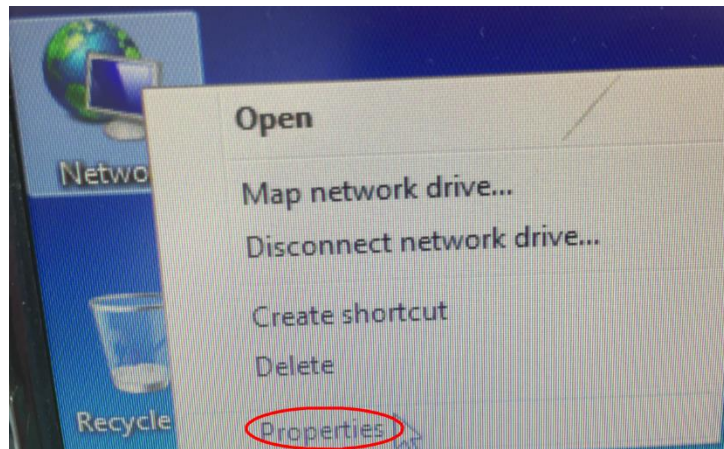

Notes:

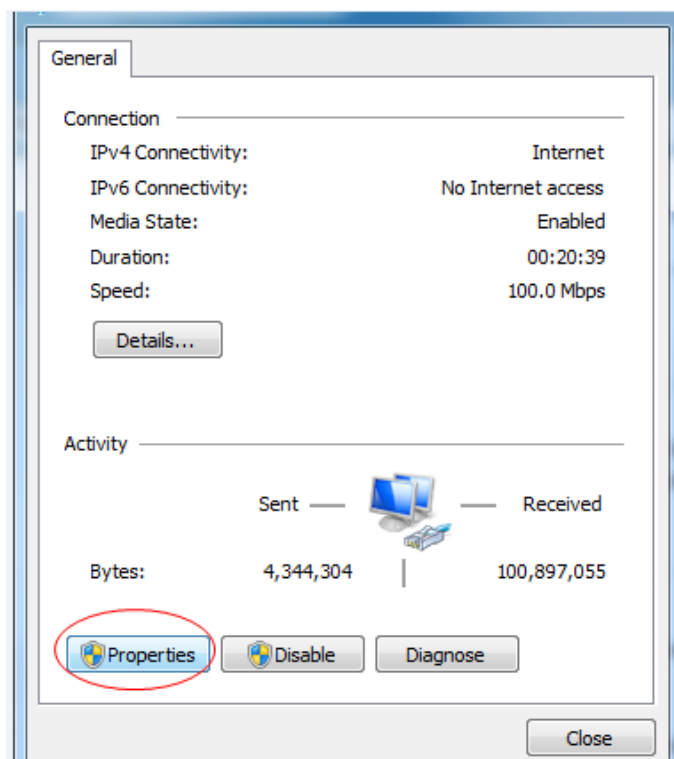

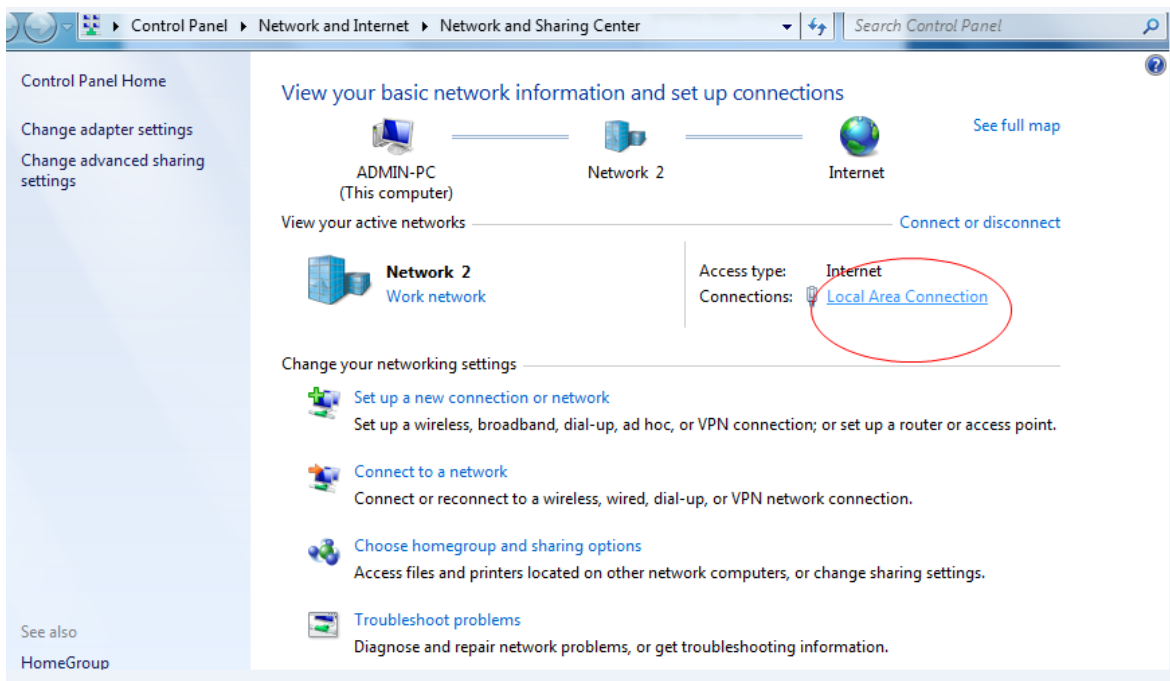

1. When the mode is set in "Manual", the machine can switched automatically, so we advise to set it in "auto".
2. In order to protect the fiber connector, turn on the power after the fiber connected.
2. Don't direct the output to human body, Please avoid eyes directly to output.

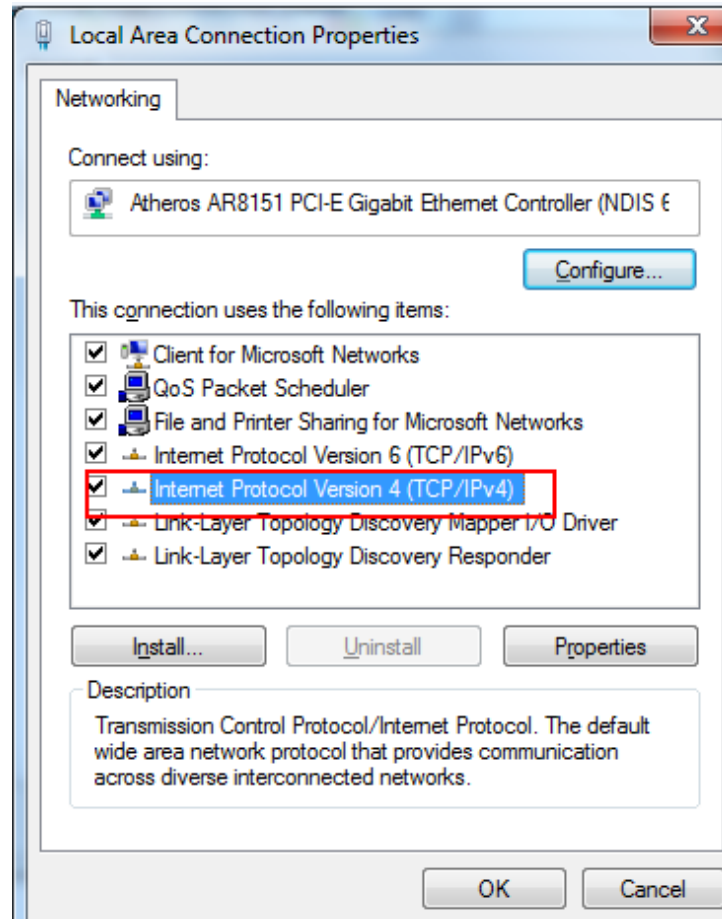

6 WEB Management Interface (Web GUI)

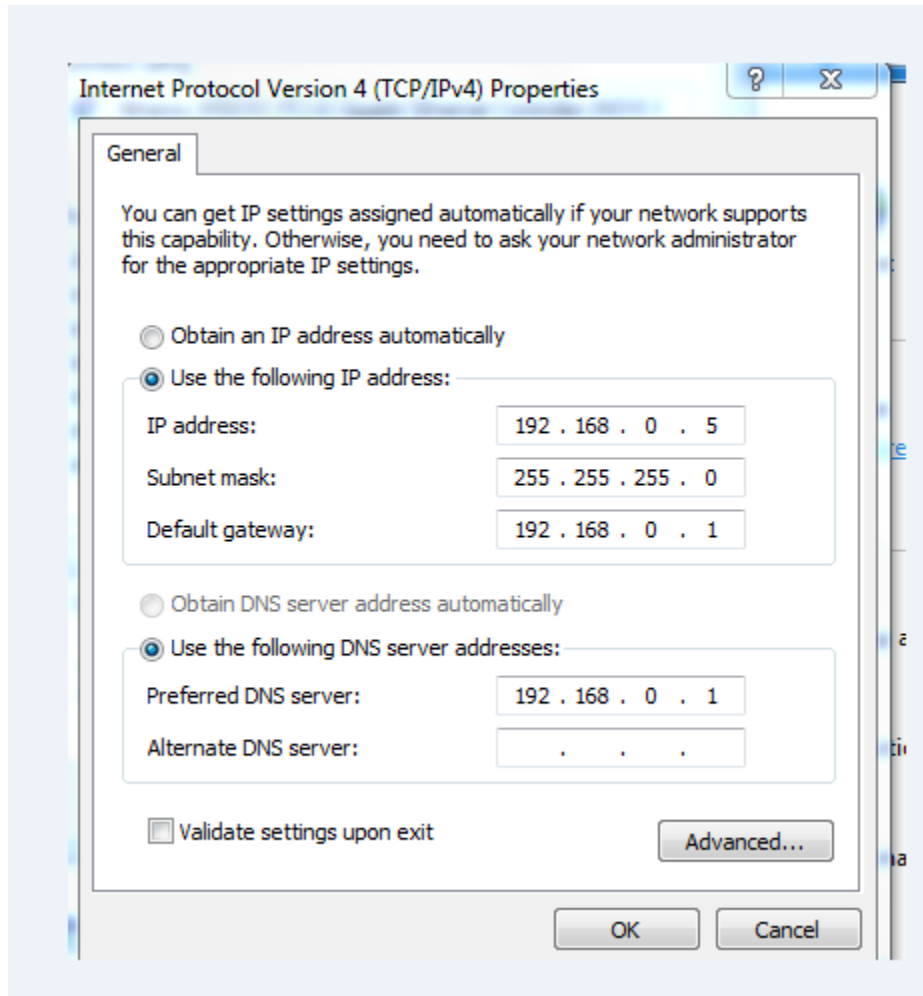

The user can use a web browser to check the working conditions and basic parameters of the amplifier. The amplifier supports IE, Chrome, Firefox, Opera and other web browsers. The following examples are based on Opera browser.

1. Find the IP add in the machine, normally it is 192.168.0.22, set the IP address of the PC in the same range as the following images:

2. Open web browser, input the IP address, For example: 192.168.0.22

Log in to the page.

Default user name and password:

User name: ASCENT

Password: 123456

3. Device status:

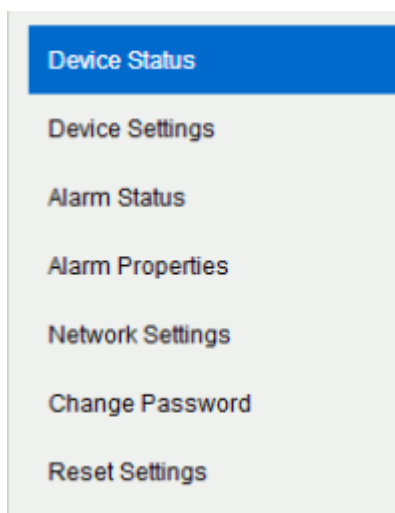

The screenshot shows the "AT5000 OPSW WEB Manager" interface. On the left is a sidebar with a "Device Status" menu item highlighted. The main content area is titled "Device Status" and contains several fields: "Device Model" (AT-50-OPSW-RF-M-SC), "Serial Number" (180628080590), "Unit Temperature" (34 °C), "Switch Mode" (Auto), "RF Enable" (Disable), and "RF Status" (Fault). Below these fields are three tables. The first table shows "Input Power" and "Threshold" for two paths. The second table shows "Output Power" for two paths. The third table shows "Voltage" and "Name" for two paths. The footer of the page reads "Copyright © 2011-2016 Ascent Communication Technology Limited".

Index	Input Power	Threshold	Description
1	-60.0 dBm	0.0 dBm	Main Path A
2	-60.0 dBm	0.0 dBm	Back Path B

Index	Output Power	Description
1	-60.0 dBm	Path A
2	-60.0 dBm	Path B

Index	Voltage	Name
1	5.1 V	Left +5V DC
2	none	Right +5V DC

4. Items guide on the left, click to enter:

The screenshot shows the 'Device Status' page in the AT5000 OPSW WEB Manager. The page has a sidebar with navigation links: Device Status, Device Settings, Alarm Status, Alarm Properties, Network Settings, Change Password, and Reset Settings. The main content area displays the following information:

Device Model: AT-50-OPSW-RF-M-SC
Serial Number: 18062806590
Unit Temperature: 34 °C
Switch Mode: Auto
RF Enable: Disable
RF Status: Fault

Index	Input Power	Threshold	Description
1	-60.0 dBm	0.0 dBm	Main Path A
2	-60.0 dBm	0.0 dBm	Back Path B

Index	Output Power	Description
1	-60.0 dBm	Path A

Index	Voltage	Name
1	5.1 V	Left +5V DC
2	none	Right +5V DC

The screenshot shows the 'Device Settings' page in the AT5000 OPSW WEB Manager. The page has a sidebar with navigation links: Device Status, Device Settings, Alarm Status, Alarm Properties, Network Settings, Change Password, and Reset Settings. The main content area displays the following settings:

PathA Threshold: 0.0 dBm
PathB Threshold: 0.0 dBm
Switch Mode: Auto
Switch Control: Path A
RF Enable: Disable
