1 Notes

1.1 Installation Precautions

- Do not place the equipment near flammable or conductive items, high temperatures (such as direct sunlight) or in wet conditions, or on a PC chassis, and check that the surrounding appliances are stable.
- Check the cable for aging. Check and verify that the AC or DC input voltage is within the permissible range of the device and that the polarity of the DC is correct.
- Unless the manufacturer permit, use the type of power indicated on the label and the adapter supplied with the product.
- To prevent damage to the product from lightning, make sure that the ground of the power outlet and the power adapter is securely grounded. In the thunderstorm, be sure to unplug the power and all the connections.
- Equipment input voltage fluctuation should be less than 10%, the power plug, refrigerators, hair dryer and iron should not use the same socket.
- To avoid electric shock or fire due to overload of the power outlet, damage to the cord or damage to the plug, check the power cord regularly. If damage is found, replace it immediately.
- Please place the device on a flat surface and cannot place items on the device.
- Equipment is easy to produce heat when working, should maintain the appropriate cooling space to avoid damage caused by overheating products. The elongated hole on the shell is designed for heat dissipation. Keep the ventilation clean and avoid falling from the heat sink into the equipment. Otherwise, the equipment may be damaged or damaged. Do not spill liquid onto the surface of the equipment.

1.2 Precautions for Use

- Please read the user manual carefully before using the equipment and follow all the precautions on the user manual and the product.
- Avoid eye looked at the optical interface directly, so as to avoid the laser beam emitted by the interface damage the eyes. Please try to wear safety glasses to effectively protect your eyes from damage. It is best to plug in the fiber optic interface jacket when the optical interface is not in use.
- Turn off the power when the device is not in use
- Before plugging the power supply, make sure that the power switch is turned off to avoid surge. Be careful when unplugging the power supply and the transformer temperature may be high.
- To ensure safety, do not open the enclosure of the device, especially when the device is powered up.
- Unplug the power supply before cleaning the equipment. Use a soft dry cloth to clean the equipment to avoid the use of liquids or sprays.
- Do not connect this product to any electronic product unless it is instructed by our customer engineer or your broadband supplier, as any incorrect connection may cause power or fire hazard.

2 Overview

Ascent's AP201C GPON ONU series is fiber to the home multi-service access GPON ONT. It's based on the mature, stable, high cost performance GPON technology and has gigabit Ethernet switching and HFC technology. Ascent GPON ONU series has a higher bandwidth, higher reliability, easy management and good quality of service (QoS) guarantee with technical performance of equipment meet the ITU-T G. 984 requirements and have good compatibility with third party manufacturers OLT.

GPON is the latest generations of access network technology. ITU-T G.984 is the standard protocol of GPON. The GPON standard differs from other PON standards in that it achieves higher bandwidth and higher efficiency using larger, variable-length packets. GPON offers efficient packaging of user traffic, with frame segmentation allowing higher quality of service (QOS) for delay-sensitive voice and video communications traffic. GPON network provides the reliability and performance expected for business services and provides an attractive way to deliver residential services. GPON enables fiber to the home (FTTH) deployments economically resulting to accelerated growth worldwide.

It adopts dual fiber WDM technology with downlink wavelength 1490 nm, uplink wavelength 1310 nm. It only needs one-core fiber to transmit data service. It also have a HFC optical port, received the CATV optical signals and convert into electric CATV signals.

Ascent GPON ONU series can integration wireless function with meet 802.11 b/g/n technical standards, the wireless transmission rate up to 300 Mbps. It has the characteristics of strong penetrating power and wide coverage. It can provide users with more efficient data transmission security.

2.1 Product Features

- Supports port-based rate limitation and bandwidth control
- In compliant with ITU-T G. 984 standard
- Wi-Fi series meet 802.11 b/g/n technical standards
- Supports data encryption, group broadcasting, port VLAN separation, etc.
- Supports Dynamic Bandwidth Allocation (DBA)
- Supports ONU auto-discovery/Link detection/remote upgrade of software
- Supports port mode of VLAN configuration
- Supports power-off alarm function, easy for link problem detection
- Supports broadcasting storm resistance function
- Supports port isolation between different ports
- Supports port flow control
- Supports ACL and SNMP to configure data packet filter flexibly
- Specialized design for system breakdown prevention to maintain stable system
- Supports software online upgrading
- EMS network management based on SNMP, convenient for maintenance
- Supports CATV service remote shutdown function
- Operating wavelength: 1100 nm to 1600 nm

- Light reflection loss: >45 dB
- Input optical power: -18 dBm to 0 dBm

2.2 Product Specifications

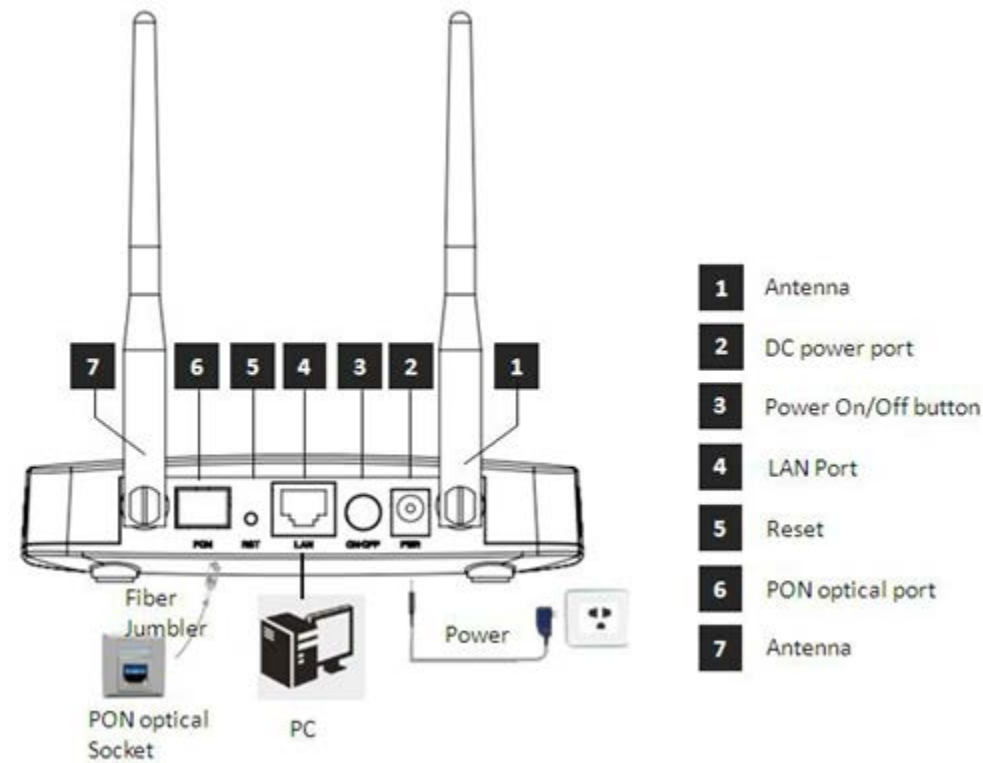

PON Port	1 × GPON port, FSAN G.984.2 standard, class B+ Downstream data rate: 2.488 Gbps Upstream data rate: 1.244 Gbps SC/PC single mode fiber 28 dB link loss and 30 km distance with 1:128
Ethernet Port (LAN)	1 × 10/100/1000M auto-negotiation RJ45 ports Full duplex / half-duplex RJ45, auto-MDI/MDI-X (transmission distance 100 m)
PON Optical Parameters	
Wavelength	Tx 1310 nm, Rx1490 nm
Tx Optical Power	0 to 5 dBm
Rx Sensitivity	-27 dBm
Saturation Optical Power	-8 dBm
Connector Type	SC
Optical Fiber	9/125 μm single-mode fiber
Data Transmission Parameters	
PON Throughput	Downstream: 2.488 Gbit/s Upstream: 1.244 Gbit/s
Ethernet	1000 Mbps
Packet Loss Ratio	<1*10E-12
Latency	<1.5 ms
Business Capability	Layer 2 wire speed switching Supports VLAN TAG/UNTAG, VLAN conversion Supports port-based speed limitation Supports priority classification Supports broadcast storm control Supports loop detection
Management	
Network Management	Supports IEEE802.3 QAM, ONU can be remotely managed by OLT Standard compliant OMCI interface as defined by ITU-T G.984.4 Supports WEB management
Management Function	Status monitor, configuration management, alarm management, log management
Environmental Specifications	
Shell	Plastic casing
Power Supply	12 V DC / 0.5 A power supply adapter
Power Consumption	<4 W
Dimensions (L × W × H)	135 mm × 90 mm × 30mm
Weight	0.2 kg
Operating Temperature	0 °C to +50 °C

Storage Temperature	-40 °C to +85 °C
Operating Humidity	10 % to 90 % RH (non-condensing)
Storage Humidity	10 % to 90 % RH (non-condensing)

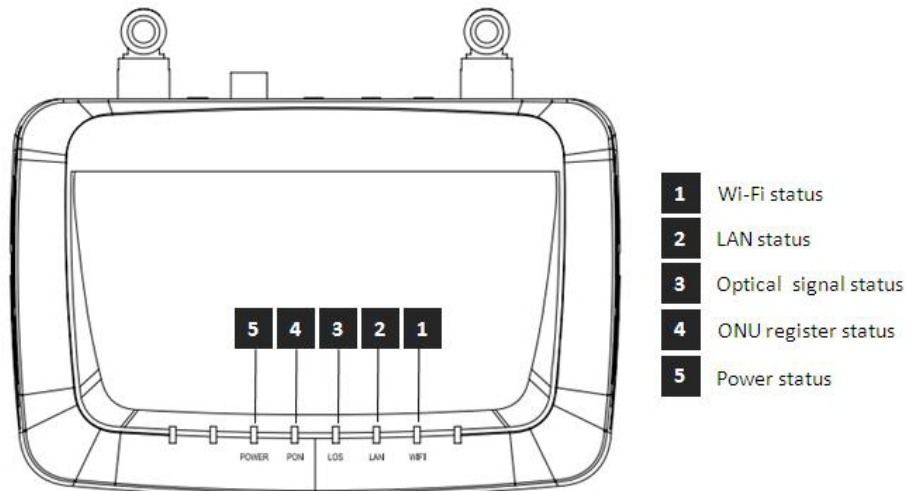

2.3 WiFi Specifications

Operating Mode	Router or bridge
Throughput	IEEE 802.11b: 11Mbps IEEE 802.11g: 54 Mbps IEEE 802.11n: 300 Mbps
Frequency	2.412 GHz to 2.472 GHz
Channels	13 × channels, configurable to meet the standards of USA, Canada, Japan, and China
Modulation	DSSS , CCK and OFDM
Coding	BPSK, QPSK, 16QAM and 64QAM
RF Receiver Sensitivity	
802.11b	-83 dBm @ 1 Mbps; -80 dBm @ 2 Mbps -79 dBm @ 5.5 Mbps; -76 dBm @ 11 Mbps
802.11g	-85 dBm @ 6 Mbps; -84 dBm @ 9 Mbps -82 dBm @ 12 Mbps; -80 dBm @ 18 Mbps -77 dBm @ 24 Mbps; -73 dBm @ 36 Mbps -69 dBm @ 48 Mbps; -68 dBm @ 54 Mbps
802.11n 20MHz	-74 dBm @ 65 Mbps -70 dBm @ 130 Mbps
802.11n 40MHz	-70 dBm @ 135 Mbps -67 dBm @ 300 Mbps
RF Output Level	
802.11b	17 dBm ± 0.5 dBm @ 11 Mbps
802.11g	15 dBm ± 0.5 dBm @ 54 Mbps 16 dBm ± 0.5 dBm @ 48 Mbps 17 dBm ± 1 dBm @ 6 Mbps to 36 Mbps
802.11n 20 MHz	14 dBm ± 0.5 dBm @ 130 Mbps 15 dBm ± 0.5 dBm @ 78 Mbps 18 dBm ± 0.5 dBm @ 6.5 Mbps
802.11n 40 MHz	14 dBm ± 0.5 dBm @ 300 Mbps 15 dBm ± 0.5 dBm @ 162 Mbps 18 dBm ± 0.5 dBm @ 13.5 Mbps
Encryption Mode	802.11i security: WEP-64/128, TKIP (WPA-PSK) and AES (WPA2-PSK)

2.4 Device Interface Definition

2.5 LED Description

Indicator

1	WIFI	WIFI
2	LAN	LAN port status

Description

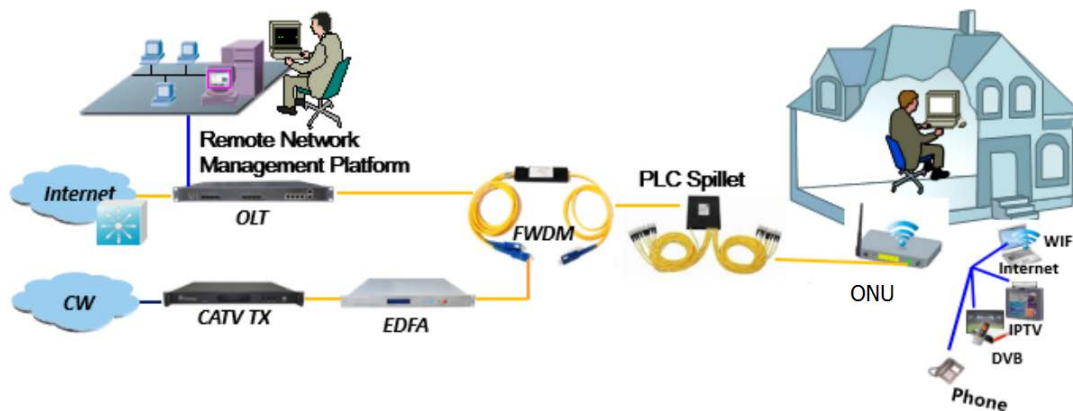

Blinking: Data is being transmitted
On: Wi-Fi function Open
Off: Wi-Fi function Close
On: Ethernet connection is normal

			Blinking: Data is being transmitted through the Ethernet port Off: Ethernet connection is not set up
3	LOS	GPON optical signals	On: Optical power lower than receiver sensitivity Off: Optical in normal
4	PON	ONT Register	On: Success to register to OLT Blinking: In process of registering to OLT Off: In process of registering to OLT
5	PWR	Power Status	On: The ONU is power on Off: The ONU is Power off

2.6 Device Connection

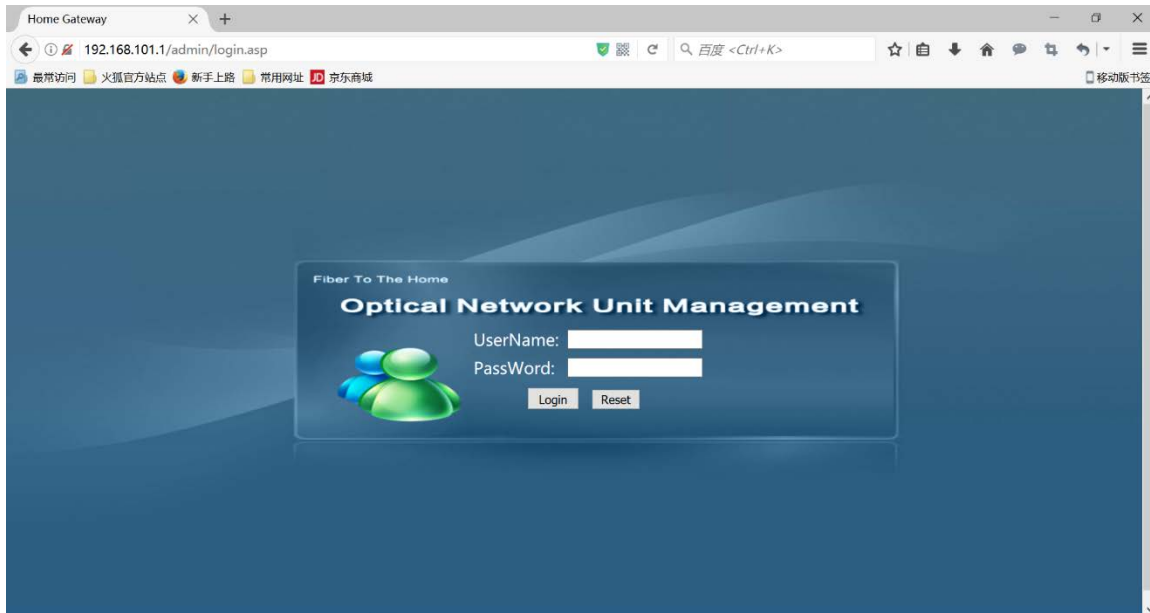

- Connect the fiber: Insert the SC fiber connector into the PON connector on the rear panel of the ONU.
- Connect the Ethernet cable: Connect the RJ-45 Ethernet cable to any LAN (LAN1-LAN4) port and each home device, that is, the computer, IPTV set-top box, and so on.
- Connect coaxial cable: Connect the coaxial cable to the RF connector of the ONU.
- Connect the AC adapter: Plug the AC / DC adapter into the AC wall jack and the ONU 12V DC power jack.

2.7 Applications

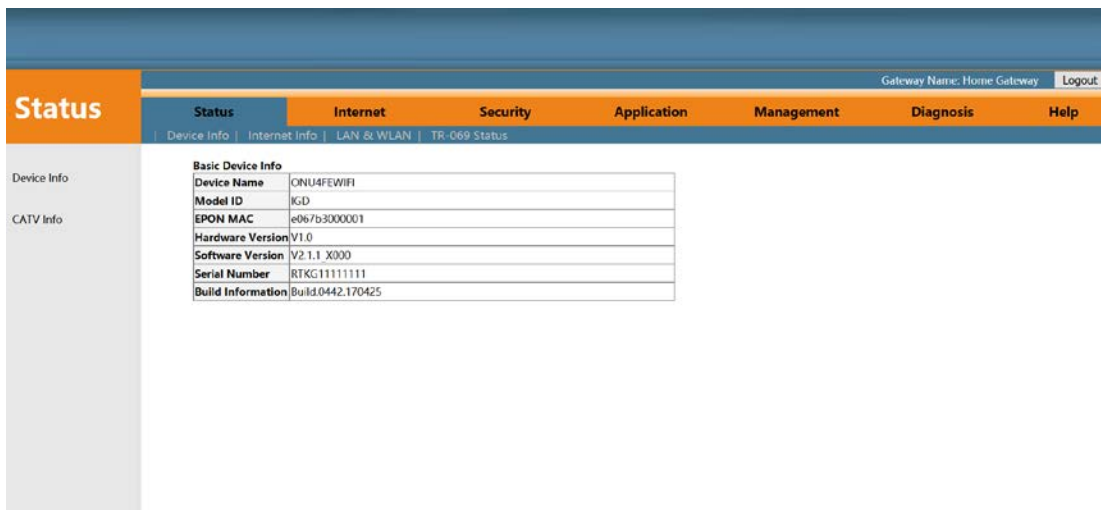

3 Login Web Management

The computer's local network port IP address manually set to 192.168.101.100, use the network cable, connect the computer and any one of the Ethernet port of EPON home gateway ONU, open the IE Web browser, copy and paste URL: <http://192.168.101.1>, the following pop-up Prompt landing page:

Input UserName: **admin** PassWord: **admin**

Click “**Login**” button, the product basics page appears, as follows:

You can start further configuration

4 ONT Authentication Settings

Select **Internet** → **Remote Mgmt** → **LOID**, Enter the following interface:

Gateway Name: Home Gateway Logout

Internet Status Internet Security Application Management Diagnosis Help

Internet Config | Port Binding | DHCP Server | WLAN Config | Remote Mgmt | QoS | Time Config | Routing

ITMS Server

Upload CA

Middleware Config

LOID

LOID AUTHORIZATION CONFIG
LOID function is used to register and send new devices. Do not change them. If the logic ID changes cause the service to be abnormal, reboot the gateway.

LOID:

Password:

4.1 LOID Authentication Mode

Fill in the following attribute fields with the pre-assigned LOID and the password (which can be empty), click **Sure**.

Gateway Name: Home Gateway Logout

Password:

5 DHCP Configuration

Select **Internet** → **DHCP Server** → configure IP address → enable DHCP server → set the DNS address, click **Apply**.

6 WAN Configuration

Route mode: ONT as a home gateway equipment, ONT IP address can be obtained in three ways, which include DHCP, Static and PPPoE. The IP address of the device on the user side is obtained through the DHCP address pool of the ONT, or by manually setting;

Bridge mode: The ONT does not obtain the IP address assigned by the upper device or cannot manually set the static IP address. It is used as a relay device and does not process the data. There are three ways to obtain the IP address of the user side device, namely DHCP, PPPoE, manual setting.

6.1 Route Mode

6.1.1 PPPoE

1. Select **Internet** → **Internet config**, “WAN Connection name” select “Add WAN connection”, “Mode” select “Route”.

Internet Config

WAN Config

WAN Connection name: Add WAN connection

Mode: Route

Connection Mode: IPv4/IPv6

☐ DHCP Obtain an IP address automatically

☐ Static Use Static IP address

☒ PPPoE PPP over Ethernet (PPPoE)

☐ PPPoE proxy enabled

☒ Mixed PPPoE routing/bridge enabled

NAT: ☒

Enable Vlan: ☐

Vlan ID: 0

802.1p: (NULL)

MTU: 1492

User name:

2. Select **PPPoE**, **Enable vlan**, configure VLAN ID and priority; Configure PPPoE user name and password and so on, “Service Mode” select “**INTERNET**”.

2. Enable VLAN, configure VLAN and priority. “Service Mode” select “Other”.

The screenshot shows the 'Internet' configuration page, specifically the 'WAN Config' section. The page has a top navigation bar with 'Internet' selected. Below it, there are tabs for 'Status', 'Internet', 'Security', 'Application', 'Management', 'Diagnosis', and 'Help'. The 'WAN Config' section contains the following fields and options:

- WAN Connection name: Add WAN connection
- Mode: Bridge
- Connection Mode: Ipv4/Ipv6
- Enable Vlan: ☒
- Vlan ID: 1000
- 802.1p: 0
- MTU: 1500
- Service Mode: Other
- LAN DHCP Disable: ☒
- Bind port:
 - ☒ Port_1
 - ☒ Port_3
 - ☒ wireless(WiFi)
 - ☐ Port_2
 - ☐ Port_4

NOTE: First internet Route Wan is default route (surfing the internet)

3-4 steps are the same as the last two step of PPPoE mode

7 IPTV Configuration

First, create a bridge WAN for IPTV according to the bridging mode of 6.2.

7.1 IGMP Snooping

Select **Application** → **IGMP Config** → **IGMP Snooping**, select “Enable”, click **Save/Apply**.

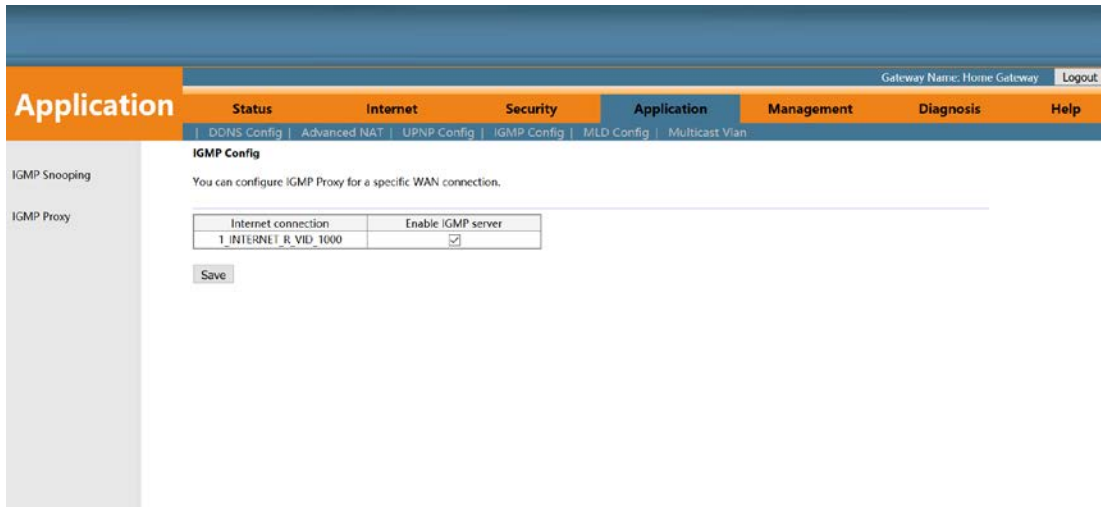

The screenshot shows the 'Application' configuration page, specifically the 'IGMP Snooping' section. The page has a top navigation bar with 'Application' selected. Below it, there are tabs for 'Status', 'Internet', 'Security', 'Application', 'Management', 'Diagnosis', and 'Help'. The 'IGMP Snooping' section contains the following fields and options:

- IGMP Snooping: ☐ Disable ☒ Enable

Save/Apply

7.2 IGMP Proxy

Select **Application** → **IGMP Config** → **IGMP Proxy**, select “Enable IGMP server”, click **Save**.

7.3 IGMP VLAN Configuration

Select **Application** → **Multicast Vlan**, select the corresponding **WAN**, click **“Modify”**, configure **multicast VLAN**, click **Modify**. The default is not configured multicast vlan

8 WLAN Configuration

1. Select **Internet** → **WLAN Config**, configure WiFi SSID, click **Save/Apply**

The screenshot shows the 'Internet' configuration page for a Home Gateway. The 'WLAN Config' tab is selected. Under the 'WPS' section, the 'Virtual SSID' is set to 'HGW-000001'. The 'Band' is set to '2.4 GHz (B+G+N)'. The 'Bandwidth' is set to '20/40MHz'. The 'Control Band' is set to 'Upper'. The 'Channel' is set to 'Auto'. The 'Rate' is set to 'Auto'. The 'Transmit power' is set to '100%'. The 'Cancel broadcast' checkbox is unchecked. The 'SGI' checkbox is checked. The 'WMM' checkbox is checked. The 'Save/Apply' and 'Advanced' buttons are visible at the bottom.

2. Select **Advanced** → **SSID Type**, “Network authentication mode” select “WPA2 Mixed”, input “WPA Pre shared key”(WiFi password)

This screenshot is identical to the one above, showing the 'Internet' configuration page with the 'WLAN Config' tab selected. The 'WPS' section shows the 'Virtual SSID' as 'HGW-000001' and various other settings like 'Band', 'Bandwidth', 'Control Band', 'Channel', 'Rate', 'Transmit power', 'Cancel broadcast', 'SGI', and 'WMM'.

The screenshot shows the 'Wireless settings - Security' page. The 'SSID Type' is set to 'Root AP - HGW-000001'. The 'Network authentication mode' is set to 'WPA2 Mixed'. The 'WPA encryption' checkbox is checked. The 'WPA2 encryption' checkbox is checked. The 'WPA Pre shared key' is set to '12345678'. The 'Save/Apply' and 'Back' buttons are visible at the bottom.

9 CATV Configuration

9.1 Configure CATV port parameter

Select **Management** → **CATV config** → configure the parameter according to your requirement → **Apply Changes**

Parameter	Value	Range/Unit
VccDead	2	(0~50 Unit: 0.1V)
VccLow	108	(0~200 Unit: 0.1V)
VccHigh	132	(0~200 Unit: 0.1V)
TempDead	50	(0~50 Unit: 0.1C)
TempLow	-100	(-300~1000 Unit: 0.1C)
TempHigh	900	(-300~1000 Unit: 0.1C)
RF Dead	12	(0~50 Unit: 0.1dBuV)
RF Low	600	(500~1000 Unit: 0.1dBuV)
RF High	950	(500~1000 Unit: 0.1dBuV)
InOptPwrDead	9	(0~50 Unit: 0.1dBm)
InOptPwrLow	-200	(-600~100 Unit: 0.1dBm)
InOptPwrHigh	20	(-600~100 Unit: 0.1dBm)
Channels	59	(0~100)

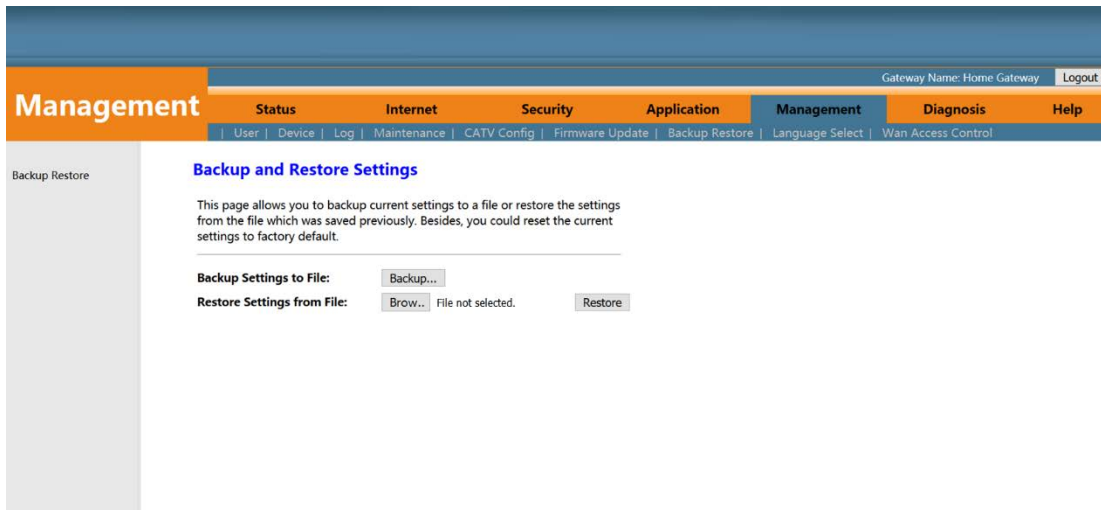

Enable CATV: ☒

Apply Changes Restore Default

10 Device Management

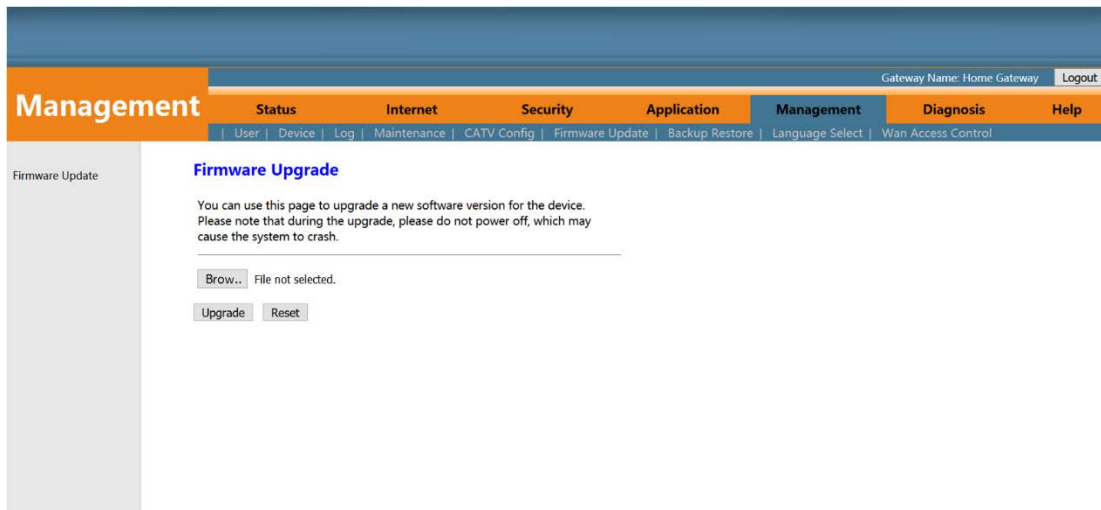

10.1 Restore Default Setting

Select **Management** → **Backup Restore** → **Restore**. The device will restore the factory defaults after the application.

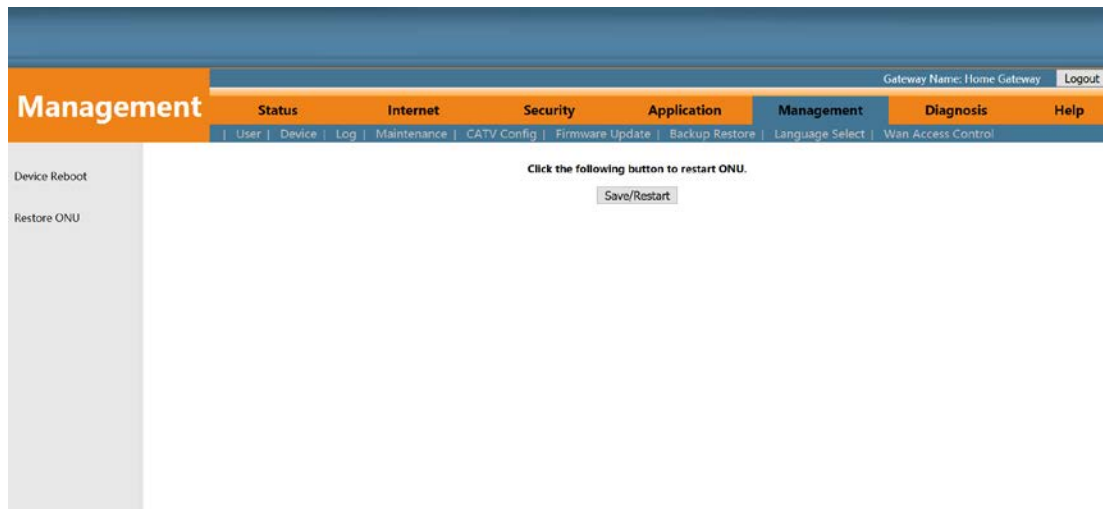

10.2 Firmware Upgrade

Select **Management** → **Firmware Upgrade** → Select firmware file, after the application, the device is upgraded to the latest software version.

10.3 Device Reboot

Select **Management** → **Device** → **Save/Restart**. Restart the device immediately after application
