

800 Gb/s SR8 OSFP 100 m Transceiver

OSFP Series

- OSFP form factor hot pluggable
- CMIS compliance
- 8 parallel lanes of 100G-PAM4 electrical and optical parallel lanes
- Dual optical port of MPO-12/APC
- Top open fin
- Up to 100m reach on multimode fiber OM4 and 50m on OM3 with FEC
- 14 Watts max
- Case temperature range of 0°C
 to 70°C

Ascent's OSFP-800G-SR8D-01 is 800 Gb/s Octal Small Form-factor Pluggable (OSFP) optical module with top open fin designed for 100 m with OM4 fiber optical communication applications. It is an InfiniBand and Ethernet 800Gb/s, 2x400Gb/s Twin-port OSFP, SR8 multimode, parallel, 8-channel transceiver using two, 4-channel MPO-12/APC optical connectors at 400Gb/s each.

The module converts 8 channels of 100 Gb/s (PAM4) electrical input data to 8 channels of parallel optical signals, each capable of 100 Gb/s operation for an aggregate data rate of 800 Gb/s. Reversely, on the receiver side, the module converts 8 channels of parallel optical signals of 100 Gb/s each channel for an aggregate data rate of 800 Gb/s into 8 channels of 100 Gb/s (PAM4) electrical output data.

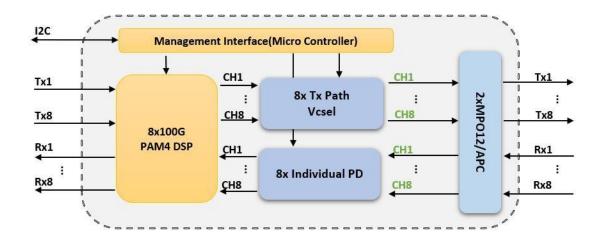

Dual MPO-12 connector can be plugged into the OSFP112 SR8 module receptacle for two sides with 4 channels each. Proper alignment is ensured by the guide pins inside the receptacle. The cable usually cannot be twisted for proper channel to channel alignment. Electrical connection is achieved through an OSFP MSA-compliant edge type connector. I2C interface is supported to read and control the status of this product. It is compatible with various NVIDIA Datacenter Switches.

Key Features •

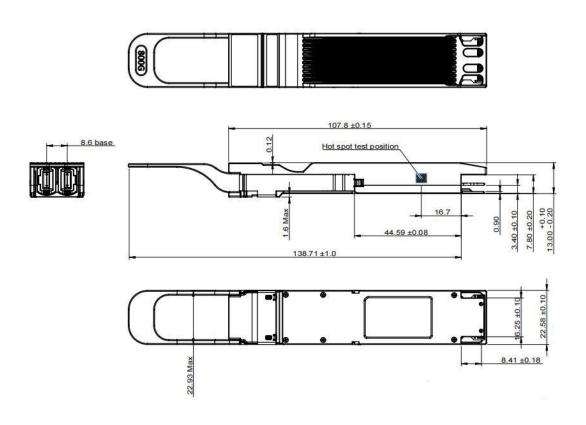

- Compliant with common management interface specifications (CMIS)
- Adaptive Tx input equalization
- Programmable Rx output amplitude
- Programmable Rx output pre-cursor
- Programmable Rx output post-cursor
- Supply voltage monitoring (DDM_Voltage)
- Transceiver case temperature monitoring (DDM Temperature)
- Tx transmit optical power monitoring for each lane (DDM_TxPower)
- Tx bias current monitoring for each lane (DDM_TxBias)
- Rx receive optical power monitoring for each lane (DDM_RxPower)
- Warning and alarm indication for each DDM function
- Tx & Rx LOL and LOS indication
- Tx fault indication
- Host and line side loopback capabilities
- Host and line side PRBS generator and checker capabilities
- CDB firmware upgrade capability
- Versatile diagnostics monitoring (VDM) capability (optional, additional power consumption increase)
- Other functions defined in CMIS

Name	Direction	Description
SCL	BiDir	2-wire serial clock signal. Requires pull-up resistor to 3.3V on host
SDA	BiDir	2-wire serial data signal. Requires pull-up resistor to 3.3V on host.
LPWn/PRSn	Input/Output	Dual Function Signal
		. Low Power mode is an active-low input signal
		. Module Present is controlled by a pull-down resistor on the module which
		gets converted to an active-low output logic signal
		Voltage zones is shown as figure3.
INT/RSTn	Input/Output	Dual Function Signal
		. Reset is an active-low input signal
		. Interrupt is an active-high output signal Voltage zones is shown as figure 3.

Optical Port Description

The optical interface port is dual MPO-12 APC receptacle. The transmit and receive optical lanes shall occupy the positions depicted in Figure 5 when looking into the MDI receptacle with the connector keyway feature on top.

ESD -

This transceiver is specified as ESD threshold 1kV for high-speed data pins and 2kV for all other electrical input pins, tested per MIL-STD-883, Method 3015.4 /JESD22-A114-A (HBM). However, normal ESD precautions are still required during the handling of this module. This transceiver is shipped in ESD protective packaging. It should be removed from the packaging and handled only in an ESD protected environment.

Notes:

- 1. Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.
- 2. If measured into type A1a.2 or type A1a.3, or A1a.4, 50 µm fiber, in accordance with IEC 61280-1-4.
- 3. The receiver shall be able to tolerate, without damage, continuous exposure to a modulated optical input signal having this power level on one lane. The receiver does not have to operate correctly at this input power.
- 4. Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.
- 5. Measured with conformance test signal at TP3 for the BER equal to 2.4x10-4.
- 6. These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver.
