ASCENT 100G QSFP28 Active Optical Cable is a high-performance integrated cable suitable for high-speed core network and data center applications.

These optical cables are suitable for short-distance QSFP28 to QSFP28 data transmission and are a flexible way to connect switches within racks and across adjacent racks. Active optical cables are much thinner and lighter than copper cables, allowing for simpler installation.

The light weight and thin fiber cable also enable efficient system airflow at the headend. They are protected from environmental pollutants, and have no electromagnetic interference (EMI) issues, which can be critical in high-density racks.

Compliant with QSFP28 MSA standards, these active optical cables offer a low-cost solution for data centers and high-performance computing, and can be seamlessly integrated with different fiber types.

Notes:

1. GND is the symbol for signal and supply (power) common for QSFP+ modules. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground plane.
2. VccRx, Vcc1 and VccTx are the receiving and transmission power suppliers and shall be applied concurrently. Recommended host board power supply filtering is shown below. Vcc Rx, Vcc1 and Vcc Tx may be internally connected within the QSFP28 transceiver module in any combination. The connector pins are each rated for a maximum current of 500mA.
